Brainstorm & Idea Prioritization

Date	30 September 2026
Team ID	SWTID-2026-5859
Project Name	Import Data using Transform Maps (Spreadsheet)
Maximum Marks	4Marks

Brainstorm & Idea Prioritization :

Brainstorming gives team members a friendly space to share their ideas freely and think creatively about solving a problem. Everyone's ideas are welcomed without judging them at the beginning. Team members can share suggestions, improve each other's ideas, and work together to find practical and creative solutions. This template makes it easier for the team to organize, discuss, and select useful ideas, even when working remotely.

Step-1: Team Gathering, Collaboration and Select the Problem Statement

Brainstorm & idea prioritization

Use this template to share ideas, encourage creativity, and develop new concepts together, even when your team is working from different locations.

🕒 10 minutes to prepare
👥 1 hour to collaborate
👤 2-8 people recommended

Before you collaborate

A little preparation can make the session more effective. Here are the steps you need to follow to get started.

🕒 10 minutes

- 1 Team gathering**
Decide who should take part in the session and send them an invitation with the necessary information or preparation work.
- 2 Set the goal**
Clearly understand and think about the problem that the brainstorming session will focus on solving.
- 3 Learn how to use the facilitation tools**
Use effective facilitation techniques to make the session engaging, productive, and successful.
[Open article](#) →

1 Define your problem statement

What problem do you want to solve? Express it as a "How Might We" question to clearly define the main focus of your brainstorming session.

🕒 5 minutes

Problem
How might we [your problem statement]?

Key rules of brainstorming
To run a smooth and productive session

- 1 Stay on topic
- 2 Defier judgment
- 3 Go for volume
- 4 Encourage wild ideas
- 5 Listen to others
- 6 If possible, be visual

Step-2: Brainstorm, Idea Listing and Grouping

3 Brainstorm

Write down all the ideas you can think of that could help solve the identified problem.

10 minutes

Tip
You can record a video while you're brainstorming to capture all the ideas that come up.

4 Group ideas

Share your ideas one by one and group similar ideas together. After organizing all the ideas, give each group a clear and meaningful title. If a group contains more than six ideas, divide it into smaller sub-groups for better organization.

20 minutes

Tip
Ask each group to share their ideas with the rest of the group. This helps to ensure that all ideas are heard and that the group can agree on a clear and meaningful title.

Person 1

Person 2

Person 3

Person 4

Person 5

Person 6

Person 7

Person 8

Step-3: Idea Prioritization

4 Prioritize

Make sure everyone on the team agrees on the key priorities. Place each idea on the grid to identify which ideas are both important and practical to implement.

20 minutes

Tip
Participants can use their thumb to point at where they think an idea should go on the grid. The facilitator can confirm the spot by using the laser pointer, holding the M key on the keyboard.

Importance

If each of these ideas could get done without any difficulty or cost, which would have the most positive impact?

Feasibility

Regardless of their importance, which ideas are more feasible than others? (Cost, time, effort, complexity, etc.)

IdeationPhase

Define the Problem Statements

Date	30 September 2026
Team ID	SWTID-2026-5859
Project Name	Import Data using Transform Maps (Spreadsheet)
Maximum Marks	2Marks

Customer Problem Statement :

Understand the problem from the customer's perspective by identifying their needs, challenges, and expectations. This helps the team clearly understand what the customer is facing and create a simple and effective solution that improves their overall experience.

I am	Describe customer with 3-4 key characteristics - who are they?	Describe the customer and their attributes here
I'm trying to	List their outcome or "job" the care about - what are they trying to achieve?	List the thing they are trying to achieve here
but	Describe what problems or barriers stand in the way - what bothers them most?	Describe the problems or barriers that get in the way here
because	Enter the "root cause" of why the problem or barrier exists - what needs to be solved?	Describe the reason the problems or barriers exist
which makes me feel	Describe the emotions from the customer's point of view - how does it impact them emotionally?	Describe the emotions the result from experiencing the problems or barriers

Example:

I am a traveler	I'm trying to book flights on my phone	But it takes a long time	Because The website is not responsive and doesn't have a mobile version	Which makes me feel Frustrated
--------------------	---	-----------------------------	--	-----------------------------------

Problem Statement (PS)	I am (Customer)	I'm trying to	But	Because	Which makes me feel
PS-1					
PS-2

Empathize&Discover

Date	30 September 2026
Team ID	SWTID-2026-5859
Project Name	Import Data using Transform Maps (Spreadsheet)
Maximum Marks	4Marks

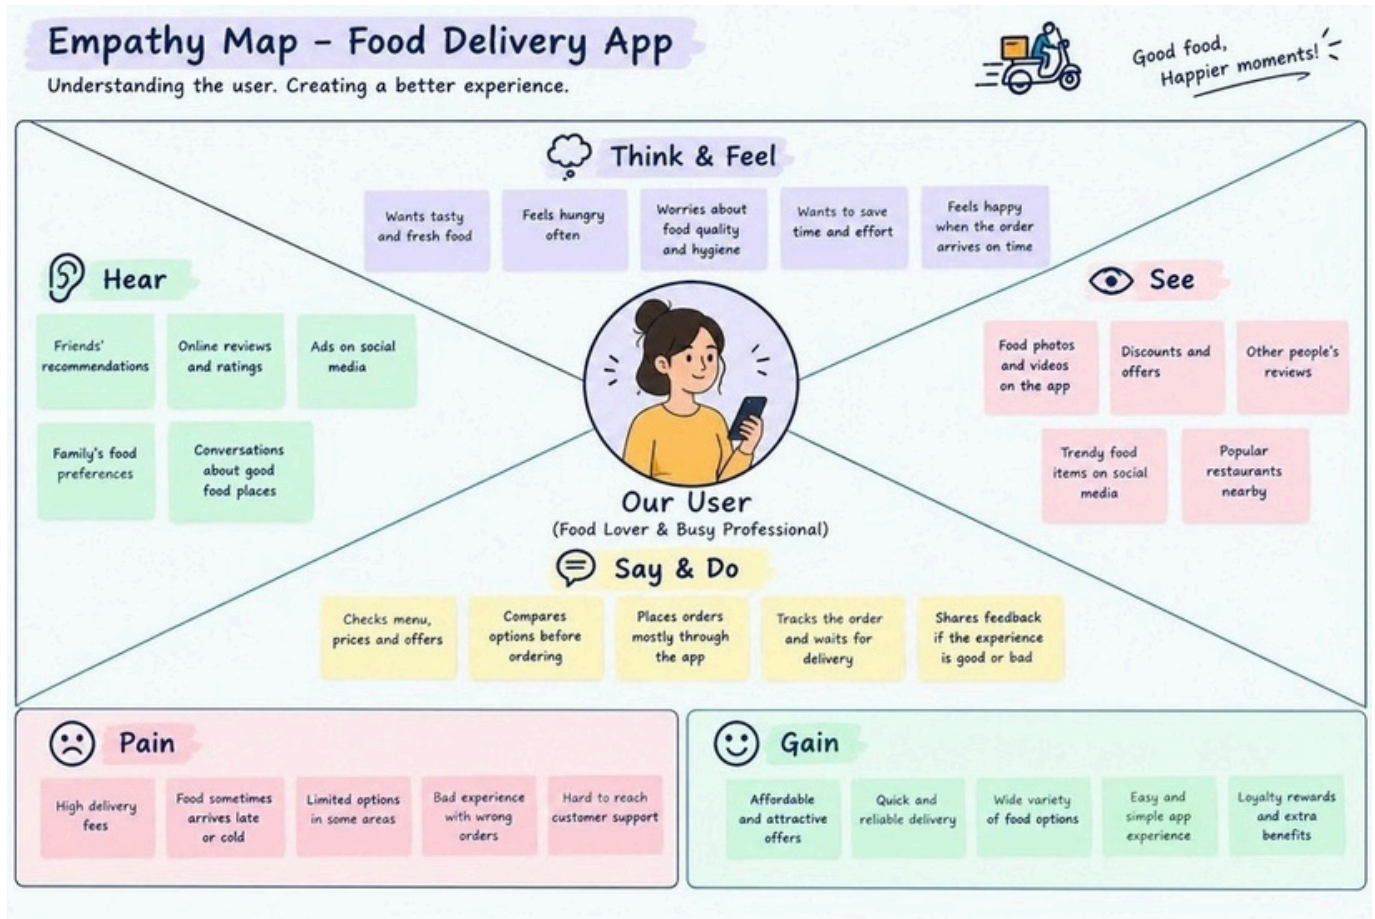

Empathy Map Canvas:

An empathy map is a simple visual tool that helps understand a user's behaviour, feelings, thoughts, and attitudes. It gives the team a clear picture of the user's needs and experiences.

It is a useful tool that helps teams understand their users more clearly. Creating an effective solution requires knowing the actual problem and the person facing it. The empathy map helps team members look at the situation from the user's perspective and understand their goals, needs, and challenges.

Example: Food Ordering & Delivery Application

Project Design Phase-II

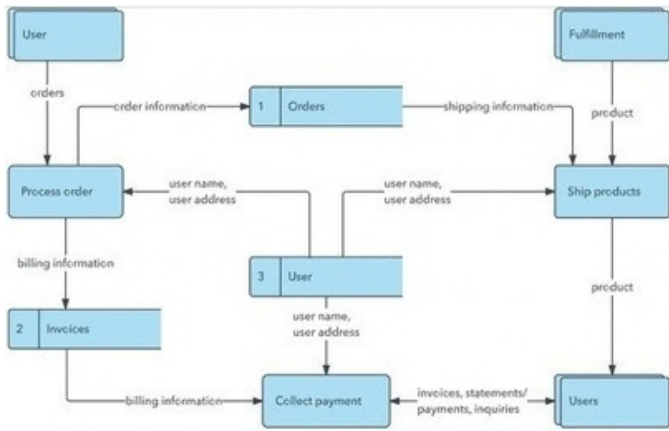

Data Flow Diagram & User Stories

Name	30 September 2026
Team ID	SWTID-2026-5859
Project Name	ImportData using Transform Maps (Spreadsheet
Maximum Marks	4Marks

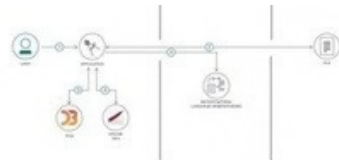

Data Flow Diagrams:

A Data Flow Diagram (DFD) is a simple graphical representation that shows how data moves through a system. It explains where the data comes from, where it goes, how it is processed, and where it is stored. A clear DFD helps us easily understand the requirements and working of a system

Example:

Example: DFD Level 0 (Industry Standard)

1. User configures credentials for the Watson Natural Language Understanding service and starts the app.
2. User selects data file to process and load.

User Stories

Use the below template to list all the user stories for the product.

[illegible]

Project Design Phase-II
Solution Requirements (Functional & Non-functional)

Date	30 September 2026
Team ID	SWTID-2026-5859
Project Name	Import Data using Transform Maps (Spreadsheet)
Maximum Marks	4Marks

Functional Requirements:

Following are the functional requirements of the proposed solution.

FR No.	Functional Requirement (Epic)	Sub Requirement (Story / Sub-Task)
FR-1	Import Employee Data	Upload Excel data; Load data into Import Set table
FR-2	Transform Employee Data	Map source fields to target fields; Run Transform Map
FR-3	Manage Duplicate Records	Use Coalesce; Update existing records; Avoid duplicates
FR-4	Generate Reports & Dashboard	Employee reports by department and location; Employee list; Dashboard

Non-functional Requirements:

Following are the non-functional requirements of the proposed solution.

FR No.	Non-Functional Requirement	Description
NFR-1	Usability	Simple process for importing and managing employee data.
NFR-2	Security	Control dashboard and report access for users, groups, and roles.
NFR-3	Reliability	Ensures accurate and consistent employee records.
NFR-4	Performance	Automates bulk data import and reduces manual work.
NFR-5	Availability	Employee information and reports are available through ServiceNow.
NFR-6	Scalability	Supports repeated imports and larger employee datasets.

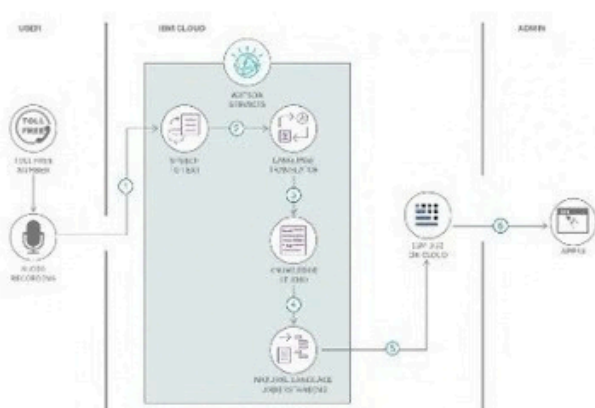

Project Design Phase-II Technology Stack (Architecture & Stack)

Date	30 September 2026
Team ID	SWTID-2026-5859
Project Name	Import Data using Transform Maps (Spreadsheet)
Maximum Marks	4 Marks

Technical Architecture:

The Deliverable shall include the architectural diagram as below and the information as per the table1 & table 2

Example: Orderprocessingduringpandemicsforofflinemode

Guidelines:

- Include all the processes (As an application logic / Technology Block)
- Provide infrastructural demarcation (Local / Cloud)
- Indicate external interfaces (third party API's etc.)
- Indicate Data Storage components / services
- Indicate interface to machine learning models (if applicable)

Table-1 : Components & Technologies:

S.No	Component	Description	Technology
1	User Interface	Interface used to upload and manage employee data.	ServiceNow UI.
2	Application Logic-1	Logic for a process in the application	ServiceNow Import Sets
3	Application Logic-2	Logic for a process in the application	ServiceNow Transform Maps
4	Application Logic-3	Identifies existing employee records and avoids duplicates.	ServiceNow UI.
5	Database	Stores imported employee information such as ID, name, email, department and location.	ServiceNow Tables
6	File Storage	Stores the Excel file used for importing employee data.	Excel Spreadsheet
7	Reporting	Displays employee information by department and location.	ServiceNow Reports
	Dashboard	Provides a centralized view of employee reports and data.	ServiceNow Dashboard

Table-2: Application Characteristics:

S.No	Characteristics	Description	Technology
1.	Open-Source Frameworks	No separate open-source framework is used in the project.	Not Applicable
2.	Security Implementations	Access to reports and dashboards can be controlled for users, groups and roles.	ServiceNow Access Controls
3.	Scalable Architecture	Can handle repeated Excel imports and larger employee datasets.	ServiceNow Import Sets & Transform Maps
4.	Availability	Employee data, reports and dashboards can be accessed through the ServiceNow platform.	ServiceNow Platform
5.	Performance	Automates bulk employee data import and reduces manual data entry.	Import Sets & Transform Maps

Project Design Phase Problem – Solution Fit

Date	30 September 2026
Team ID	SWTID-2026-5859
Project Name	Import DatausingTransform Maps (Spreadsheet)
Maximum Marks	2Marks

Problem – Solution Fit :

Problem–Solution Fit is about understanding the real challenges customers face and developing a solution that actually helps them. It helps businesses understand what customers need, how they behave, and what kind of solution can make their experience easier, better, and more useful.

Purpose:

- ☐ Solve customer problems effectively by understanding their needs, challenges, and individual situations.
- ☐ Reach more customers by using platforms and methods they are already familiar with and trust. Communicate in a simple and clear way using messages that connect with them.
- ☐ Build better relationships with customers by understanding their problems, needs, and behavior.
- ☐ Understand the current situation and identify simple ways to improve it and provide a better experience for your target customers

1. CUSTOMER SEGMENT(S) CS Who is your customer? I.e. working parents of 0-5 y.o. kids	6. CUSTOMER CONSTRAINTS CC What constraints prevent your customers from taking action or limit their choices of solutions? I.e. spending power, budget, no cash, network connection, available devices.	5. AVAILABLE SOLUTIONS AS Which solutions are available to the customers when they face the problem or need to get the job done? What have they tried in the past? What pros & cons do these solutions have? I.e. pen and paper is an alternative to digital notetaking
2. JOBS-TO-BE-DONE / PROBLEMS JBP Which jobs-to-be-done (or problems) do you address for your customers? There could be more than one; explore different sides.	9. PROBLEM ROOT CAUSE RC What is the real reason that this problem exists? What is the back story behind the need to do this job? I.e. customers have to do it because of the change in regulations.	7. BEHAVIOUR BE What does your customer do to address the problem and get the job done? I.e. directly related: find the right solar panel installer, calculate usage and benefits; Indirectly associated: customers spend free time on volunteering work (i.e. Greengaze)
3. TRIGGERS TR What triggers customers to act? I.e. seeing their neighbour installing solar panels, reading about a more efficient solution in the news.	10. YOUR SOLUTION SL If you are working on an existing business, write down your current solution first, fill in the canvas, and check how much it fits reality. If you are working on a new business proposition, then keep it blank until you fill in the canvas and come up with a solution that fits within customer limitations, solves a problem and matches customer behaviour.	8. CHANNELS of BEHAVIOUR CH 8.1 ONLINE What kind of actions do customers take online? Extract online channels from #7 8.2 OFFLINE What kind of actions do customers take offline? Extract offline channels from #7 and use them for customer development.
4. EMOTIONS: BEFORE / AFTER EM How do customers feel when they face a problem or a job and afterwards? I.e. lost, insecure → confident, in control → use it in your communication strategy & design.		

Project Design Phase
Proposed Solution

Date	30 September 2026
Team ID	SWTID-2026-5859
Project Name	ImportDatausingTransform Maps (Spreadsheet)
Maximum Marks	2Marks

Proposed Solution :

Project team shall fill the following information in the proposed solution .

S.No.	Parameter	Description
1.	Problem Statement (Problem to be solved)	Manual employee data entry can cause errors and duplicate records.
2.	Idea / Solution description	Use ServiceNow Import Sets and Transform Maps to import Excel data automatically.
3.	Novelty / Uniqueness	Coalesce updates existing records and prevents duplicates.
4.	Social Impact / Customer Satisfaction	Saves time, reduces errors, and improves data accuracy.
5.	Business Model (Revenue Model)	ServiceNow setup, customization, maintenance, and support services.
6.	Scalability of the Solution	Can handle larger datasets and provide reports and dashboards.

Project Design Phase Solution Architecture

Date	30 September 2026
Team ID	SWTID-2026-5859
Project Name	Import Data using Transform Maps (Spreadsheet)
Maximum Marks	4 Marks

Solution Architecture:

Solution Architecture is the process of converting a business problem into a practical and effective technology solution. It connects the business requirements with suitable technology and provides a clear plan to achieve the project goals.

- ☐ Select the right technology to address the existing business problems effectively.
- ☐ Explain how the system works, including its structure, main features, and functions, so the project team can understand it easily.
- ☐ Identify the important features, development steps, and requirements needed to build the solution.
- ☐ Set clear guidelines and specifications for developing, managing, testing, and delivering the final solution.

Example - Solution Architecture Diagram:

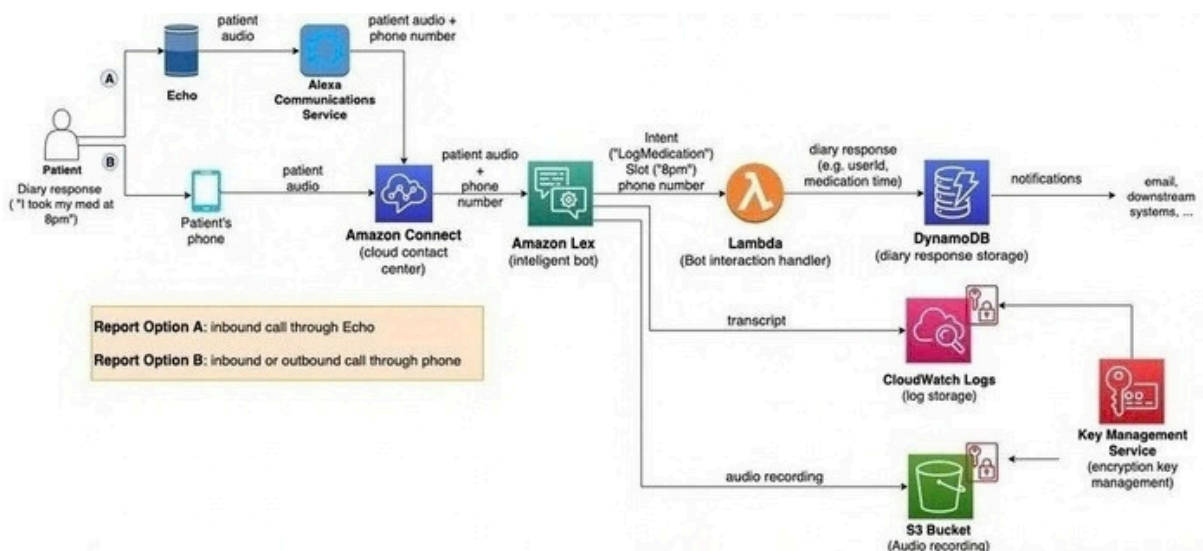

Figure 1: Architecture and data flow of the voice patient diary sample application

Sprint duration is defined as a fixed time or period in which a set of tasks have to be completed by a team

Epic is defined as a big task or project which cannot be accomplished in a single sprint. It is further divided into stories which can be accomplished in several sprints.

Stories represent small tasks. It is a part of Epic.

Story point is defined as a numeric value which indicates the effort required to complete a story. (usually in form of Fibonacci series)

1-Very Easy task

2-Normal task

3-Moderate task

5-Difficult task

Story point - 5(1,2,3,5)

Sprint 1

Data collection (Epic 1)

Gathering data (USN1) 2

Loading data (USN2) 1

Data preparation (Epic 2)

Handling missing values (USN3) 3

Creating fields (USN4) 3

Handling inconsistency in data (USN5) 3

Total story points in Sprint 1 = $2+1+3+3+3=12$

Sprint 2

Data visualization (Epic 3)

Bar chart (USN6) 2

Pie chart (USN7) 2

Line chart (USN8) 2

Map (USN9) 4

Dashboard (Epic 4)

Developing dashboard (USN10) 5

Story (Epic 5)

Developing story (USN11) 5

Total story points in Sprint 2 = $2+2+2+4+5+5=20$

Total Story Points

Sprint 1 = 12

Sprint 2 = 20

Velocity = Total Story points completed / Number of sprints

Total story points = $12+20=32$

Number of sprints = 2

Velocity = $32/2$

16 (Story Points per Sprint)

Your team's velocity is 16 Story Points per Sprint.

Project Planning Phase

Project Planning

Template(ProductBacklog,SprintPlanning, Stories, Story points)

Date	30 September 2026
Team ID	SWTID-2026-5859
Project Name	ImportData using Transform Maps (Spreadsheet)026-3968
Maximum Marks	5Marks

Product Backlog, Sprint Schedule, and Estimation (4 Marks)

Use the below template to create product backlog and sprint schedule

Sprint	Functional Requirement (Epic)	User Story Number	User Story / Task	Story Points	Priority	Team Members
Sprint-1	Prepare Employee Data	USN-1	I can prepare the sample employee spreadsheet data for importing into ServiceNow.	2	High	
Sprint-1	Employee Test Table	USN-2	I can create the Employee Test table with Employee ID,	3	High	
Sprint-1	Import Set	USN-3	I can create the Employee Import table and load employee data	3	High	
Sprint-1	Transform Transform & Validation	USN-4	create the Sample Spreadsheet Import Transform Map	3	High	
Sprint-2		USN-5	execute the Transform Map and verify that employee records	3	High	

Project Tracker, Velocity & Burndown Chart: (4 Marks)

Sprint	Total Story Points	Duration	Sprint Start Date	Sprint End Date (Planned)	Story Points Completed (as on Planned End Date)	Sprint Release Date (Actual)
Sprint-1	20	6Days	24 Oct 2022	29 Oct 2022	20	29 Oct 2022
Sprint-2	20	6Days	31 Oct 2022	05 Nov 2022		
Sprint-3	20	6Days	07 Nov 2022	12 Nov 2022		
Sprint-4	20	6Days	14 Nov 2022	19 Nov 2022		

Velocity:

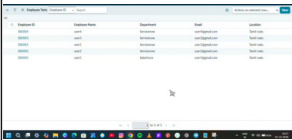

Imagine we have a 10-day sprint duration, and the velocity of the team is 20 (points per sprint). Let's calculate the team's average velocity (AV) per iteration unit (story points per day)

$$AV = \frac{\text{sprint duration}}{\text{velocity}} = \frac{20}{10} = 2$$

Team ID	SWTID-2026-5859
Project Name	Project - Import Data using Transform Maps (Spreadsheet)
Maximum Marks	

Project Overview:

Project Name: Import Data using Transform Maps (Spreadsheet)

Project Description: Import employee data from Excel into ServiceNow using Import Sets and Transform Maps.

Project Version: 1.0

Testing Period: Start Date – End Date

Testing Scope:

- Excel employee data import
- Import Set table creation
- Transform Map and field mapping
- Employee data transformation
- Coalesce and duplicate prevention
- Data validation
- Employee reports
- Employee Analytics Dashboard

Testing Environment:

URL/Location: ServiceNow Platform

Credentials: Admin/User credentials as required

Test Cases:

Test Case ID	Test Scenario	Test Steps	Expected Result	Actual Result	Pass/Fail
TC-001	Upload employee Excel data	1. Open Load Data 2. Select Excel file 3. Submit	Excel data is loaded into Import Set successfully.	Data loaded successfully.	Pass
TC-002	Create Transform Map	1. Open Transform Map 2. Select source table 3. Select target table 4. Save	Transform Map is created successfully.	Created successfully.	Pass
TC-003	Map employee fields	1. Open Mapping Assist 2. Map Employee ID, Name, Email, Department and Location 3. Save	Source and target fields are mapped correctly.	Fields mapped correctly.	Pass

Bug Tracking:

Bug ID	Bug Description	Steps to reproduce	Severity	Status	Additional feedback
BG-001	No bugs identified during testing.	Tested Excel import, transformation and validation.	Low	Closed	All tested functions worked as expected.

Sign-off:

Tester Name: Iniyan

Date: 30.09.2026

Signature: Iniyan

Notes:

- Ensure that all test cases cover both positive and negative scenarios.
- Encourage testers to provide detailed feedback, including any suggestions for improvement.
- Bug tracking should include details such as severity, status, and steps to reproduce.
- Obtain sign-off from both the project manager and product owner before proceeding with deployment.

Full Stack Development with MERN

Project Documentation format

1. Introduction

Project Title: Import Data using Transform Maps (Spreadsheet)

Team Members:

- Iniyan A– (Team leader) nr349560@gmail.com
- Jegan S -(Member 2) jegansjegan44@gmail.com
- Tharun J-(Member 3) tharunsowra@gmail.com
- Vishal R-(Member 4) vishalfootball21@gmail.com
-

2. Project Overview

Purpose: The main purpose is to provide an efficient method for importing and managing employee data in ServiceNow.

Features:

- Import employee data from Excel.
- Map source fields to target fields.
- Insert and update employee records.
- Prevent duplicate records using Coalesce.
- Generate employee reports.
- Display reports in a dashboard

3. Architecture

The project follows this flow:

Excel Spreadsheet → Import Set → Transform Map → Employee Test Table → Reports → Dashboard

- Import Set: Temporarily stores imported spreadsheet data.
- Transform Map: Maps source fields to target fields.
- Employee Test: Stores the final employee records.
- Reports/Dashboard: Provides visualization and analysis of employee data.

4. Setup Instructions

Prerequisites:

- ServiceNow instance
- Appropriate ServiceNow access
- Excel/Google Spreadsheet
- Employeesample data

Installation:

- Prepare the employee spreadsheet.
- Create the Employee Test table.
- Create the Employee Import table.
- Create the Sample Spreadsheet Import Transform Map.
- Map the source and target fields.
- Run the transformation and verify the records.

5. Folder Structure

The main components are:

- Employee Test – Target table
- Employee Import – Import Set table
- Sample Spreadsheet Import – Transform Map

-
- Reports – Employee reports
Employee Analytics Dashboard – Dashboard for reports

6. Running the Application

1. Open the ServiceNow instance.
2. Navigate to Load Data.
3. Upload the Excel spreadsheet.
4. Select the Employee Import table.
5. Submit the data.
6. Select Run Transform.
7. Select the Transform Map and click Transform.
8. Verify the records in the Employee Test table.

7. API Documentation

This project does not use custom APIs.
The main ServiceNow components used are:

-
- Import Set – Loads spreadsheet data.
- Transform Map – Maps source and target fields.
Transform History – Shows import results.

8. Authentication

The project uses the authentication and access-control system provided by ServiceNow.
Users require appropriate permissions to access Import Sets, Transform Maps, Reports, and Dashboards.

9. User Interface

The project uses the ServiceNow interface for:

- Uploading spreadsheets
- Configuring Transform Maps
- Viewing employee records
- Checking Transform History
- Viewing reports
Viewing the Employee Analytics Dashboard

10. Testing

The project was tested by:

- Importing employee data.
- Checking field mappings.
- Verifying inserted records.
- Testing updates to existing records.
- Testing duplicate records using Coalesce.
Checking Transform History for inserted, updated, and ignored records.

11. Screenshots or Demo

•

DEMO LINK :

12. Known Issues

- Incorrect spreadsheet data may cause import errors.
- Incorrect field mapping may result in wrong data.
- Proper Coalesce configuration is required to avoid duplicate records.

13. Future Enhancements

- Automate regular spreadsheet imports.
- Add additional data validation.
- Add more employee reports.
- Improve dashboard visualizations.
- Add import error notifications.
